

Jonathan Danilov

Brooklyn, NY | 917-929-5786 | jonny.danilov14@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

EDUCATION

Baruch College, Zicklin School of Business, New York, NY **Expected June 2028**
Bachelor of Business Administration in Computer Information Systems, Minor in Computer Science | GPA: 3.4
Relevant Coursework: Introduction to Python, Object-Oriented Programming (C++), Programming for Analytics

EXPERIENCE

SDP Enterprises Inc., Brooklyn, NY **January 2023 – Present**
Senior Administrator, Operations & Automation

- Build and deploy Python automation tools that support internal operational workflows.
- Identify recurring manual processes and implement automated solutions to improve team efficiency.
- Lead and coordinate a team of 10 administrators, organizing access to shared files and resources for a Discord community of 10,000+ members.

PROJECTS

MLB Matchup Analytics Toolkit | Python, pandas, pybaseball, openpyxl

- Designed a two-part MLB research toolkit that pulls batter-pitcher matchup and starting-pitcher data from the MLB Stats API and Baseball Savant via pybaseball and processes it with pandas.
- Calculates historical matchup statistics, handedness splits, home/away ERA, and barrel rate, then exports color-coded Excel reports with openpyxl; outputs are used in daily production analysis for SwiftDailyPicks.

MLB Home Run Tracker | Python, Discord API, Railway | [Live Dashboard](#)

- Architected a live home-run alerting system with a web dashboard and companion Discord bot that delivers real-time alerts to paying subscribers.
- Integrated, tested, and debugged a backend that polls live MLB game data every 15 seconds to detect new home runs; deployed the dashboard and bot on Railway.

Price Tracker | Flask, PostgreSQL, BeautifulSoup, APScheduler, Chart.js, Google OAuth | [Live](#) | [Source](#)

- Built a full-stack price-monitoring web application that runs scheduled product-page scrapes with APScheduler and BeautifulSoup and persists historical pricing data in PostgreSQL.
- Implemented Google OAuth for authenticated, user-specific watchlists and Chart.js visualizations of price trends over time; deployed on Railway.

Resubscriber Discord Bot | Python, Discord API

- Architected and deployed a Discord automation bot that identifies lapsed or inactive subscribers and sends automated win-back messages to encourage resubscriptions.

ADDITIONAL EXPERIENCE

NetCost Market, Brooklyn, NY | *Cashier* **July 2021 – July 2022**
• Served 300–600 customers in a fast-paced retail environment and supported a 10-person team by packaging deliveries.

TECHNICAL SKILLS

Programming: Python, C++, SQL, JavaScript

Data & Databases: pandas, openpyxl, pybaseball, PostgreSQL

Development: Flask, HTML/CSS, API Integration (MLB Stats API, Discord API), Web Scraping (BeautifulSoup), APScheduler, Google OAuth, Chart.js, Automation, Discord Bot Development

Tools & Deployment: Git/GitHub, Railway

Languages: Russian (Fluent)
